Overview

mGolfCard is an application that allows you to edit, save, and send golf scores and game information on your J2ME™ (Java™) enabled cellular phone.

The application runs entirely on your phone, so unlike WAP you don't need to be connected to your cellular service to edit and save scores. So even if you are on a golf course with no cellular signal you can use the application. A cellular service connection is only required when installing the application and to sending scores.

Your scores are stored on your phone, however you may send a copy of your scores to an existing email account.

Getting Started

To use mGolfCard to score a game, please follow these steps:

1. Load the mGolfCard application.
2. After the splash screen displays, highlight “Add Game” from the menu and hit the “GO” key (Note: On some phones you must first hit the “Options” key.)
3. Type in a “Course Name” (ex. “St. Andrews”) and hit the “SAVE” key. This will save your new game and bring you back to the main menu.
4. Highlight “Show Games” and hit the “GO” key.
5. Highlight the game you just created (ex. “St. Andrews”) and hit the “GO” key.
6. Highlight “Edit Scores” and hit the “GO” key.
7. Use the numeric keys to enter “Par” and “Score” values. Use the Up/Down keys to change the “Hole” and to scroll the screen. Use the Left/Right or “*” or “#” keys to change the column from “Par” to “Score” and back.
8. Hit the “SAVE” key so your scores are not lost.

Sending Scores

Before sending scores you must type in and save an email address and password for your mGolfCard user account. Highlight “Setup” in the main menu and follow the instructions on screen.

Troubleshooting

The table below lists problems and possible solutions.

Problem	Possible Solution
I get the message “out of storage space”, when I try to add a new game.	<p>Your mobile device has limited storage capacity. To add more game information try one of the following solutions:</p> <ul style="list-style-type: none"> ● Delete unneeded games from the mGolfCard application. ● Delete unneeded data from another application. ● Remove an unneeded application. ● Upgrade your mobile device to another device with larger storage capacity (contact your mobile service provider for assistance).
I accidentally uninstalled the application.	Please contact your mobile service provider to obtain a new copy of the software. All data is lost on uninstall and must be re-entered.
I can't see all of my games in the game list.	If you have saved several games there may be too many to display at one time on your mobile device's screen. Hit the down arrow key until the screen scrolls the hidden game information into view.
My password does not display in the setup form.	For security reasons, the password will not show in the setup screen. This is to help prevent someone near you from seeing your passwords.

Technical Support

Before contacting technical support please read the troubleshooting

section. If after reading this section you are still having trouble, please contact technical support at one of the following contacts points.
